

## **MERCURY**

- smallest planet of our solar system
- closest planet to the Earth and the Sun
- fastest planet without moon

@splendidmoms

## **VENUS**

- hottest planet in the solar system
- second planet from the Sun and almost as large as Earth
- it is very bright and does not have any moons

@splendidmoms

## **EARTH**

- fifth largest planet of our solar system
- this is the only place where there is life
- third planet from the Sun and has one moon

@splendidmoms

## **MARS**

- fourth planet from the Sun
- it is called Red planet because of iron on surface
- it has two moons : Phobos and Deimos

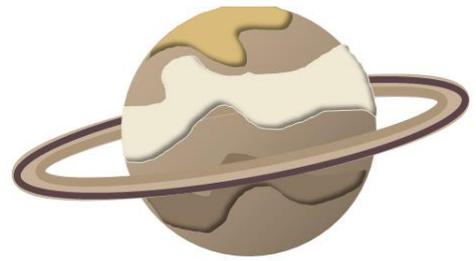

@splendidmoms

## JUPITER

- largest planet of our solar system
- fifth planet from the Sun
- it has more than 80 moons and the largest moon of all planets

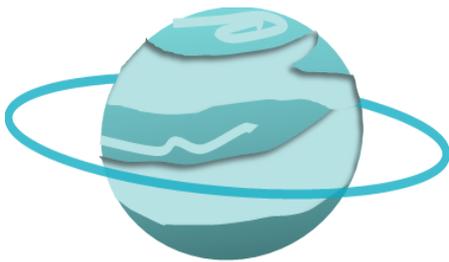

@splendidmoms

## SATURN

- second largest planet of our solar system
- sixth planet from the sun and huge planet made of gas and has visible rings
- it has only one moon

@splendidmoms

## URANUS

- second farthest planet from the Sun
- fourth largest planet and an ice giant
- the planet orbits on its side and has 27 moons

@splendidmoms

## NEPTUNE

- it is the farthest planet from the Sun
- ice giants with heavy winds and storms
- made of dense gas and has 14 moons

@splendidmoms
